

# EZTitles Plug-ins 5

Dear friends,

We are proud to introduce our new major release – EZTitles Plug-ins for ProMedia Carbon, Rhozet Carbon Coder, Adobe® Premiere® Pro, Avid® Media Composer® and Capella Systems' Cambria File Convert version 5. We've put all our experience and the feedback we got from you into developing the best plug-ins yet. And we think encoding your subtitles and captions will prove to have never been as precise, easy and fast.

Below is just a glimpse of what we have been able to introduce:

## Vertical Text

---

We've made our plug-ins much more functional with the option to work with text in the vertical direction, which is common for the Chinese, Japanese and Korean language scripts.

## Asian Text Font

---

Choose different fonts for Asian scripts and Latin text on the same line.

## Extended Support for Arabic and Asian Text Scripts

---

We've improved the rendering and added support for several new South Asian languages.

## Brand New EZTitles Plug-in for Capella Systems

---

We've developed a brand new EZTitles Plug-in for Capella Systems' Cambria File Convert. It is a small, light-weight tool which enables you to encode burned-in (also referred to as open subtitles) subtitles, teletext, closed captions right or DVB subtitles onto your video clip.

The Plug-in is available to the default's User Interface as well as the advanced Cambria Watch Folder setup on single machine or in a transcoding farm controlled by a Cambria Cluster. It supports the most widely used file formats as EBU, PAC, Cheetah CAP, and many more.

Our EZTitles Plug-in for for Capella Systems' Cambria File Convert can burn DVB subtitles, Closed Captions 608 and 708, Teletext subtitles OP--47 and Teletext Level 1.5.

The EZTitles Plug-in for Capella Systems Cambria File Convert will offer a brilliant interface where almost every aspect of the subtitles' appearance can be adjusted with ease.
